Assisted Wi-Fi Roaming

Making Transmission Effective
Disassociate the Wi-Fi clients who are out of the effective transmission range defined by custom Basic Rate or/and RSSI threshold, and force them to pick up another access point with a stronger signal.

Resource Saving
Proactively kick out the clients with a low basic rate or low RSSI can prevent the access points trying to do ineffective transmission but saving the airtime, which will results in better Wi-Fi experience for all.

No Controller Required
Assisted Roaming is a feature built in all Vigor Access Points and selected Wi-Fi routers. They operate without a wireless controller, providing an ideal solution for simple network deployment.
